DETAILED ACTION

Status of Claims

Claims 1-15 are as originally filed, no Claim 16 exists, and Claim 17 has been withdrawn from consideration.

Election/Restrictions

Claim 17 is withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected apparatus, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 2 October 2007.

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

Applicant needs to insert the title "Brief Description of the Drawings" on page 12 of the specification.

Claim Objections

Claims 5-15 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to other claims in the alternative only and cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims 5-15 not been further treated on the merits.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 1 recites the limitation "the carrier material" in step (iii). There is insufficient antecedent basis for this limitation in the claim. Applicant provides basis for "a first molten carrier material" and "a second molten carrier material" only.

In Claim 1, there is no support for "the thermal requirements for melting the metallised raft and for the chemical reactions taking place ... zone" in step (vi) since there is no active step of melting the raft or for reactions taking place.

Allowable Subject Matter

Claims 1-4 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action.

The following is a statement of reasons for the indication of allowable subject matter:
Warner (US 5,853,452) teaches circulating hot metal in a closed loop path through first and second hearths and chambers (abstract) as shown in the figure below:

However, Warner '452 does not disclose or suggest a closed solid-state reduction loop and a closed melt refining loop as claimed.

Warner (US 5,358,544) teaches recovering zinc from zinc sulfide material by introducing such material at a feed station into a molten copper sulfide matte which is circulated in a closed loop path through the feed station, a zinc recovery station and an oxidizing station (abstract) as shown below in Figure 1:

However, Warner '544 does not disclose or suggest a closed solid-state reduction loop and a closed melt refining loop as claimed.

Andrews et al (US 4,741,770) teaches a smelting process suitable for the extraction of zinc, lead and copper from raw materials as shown in Figure 3 below:

FIGURE 1

Art Unit: 1793

Andrews et al teach circulating offgases but not a first molten carrier and a second molten carrier or a closed solid-state reduction loop and a closed melt refining loop as claimed.
